PROFESSIONAL SUMMARY

Software Engineer Intern at Recruit CRM building AI features for an applicant tracking system (ATS). CSE undergraduate (9.12 CGPA) and competitive programmer (2000+ rating on LeetCode, 1000+ problems solved) with hands-on experience across full-stack development (TypeScript, Next.js, Node.js, PostgreSQL), event-driven workflow orchestration, and applied GenAI (LangGraph, RAG, multi-agent systems). Built and shipped three production-deployed platforms: a workflow automation engine, a real-time communication app, and a multi-agent AI backend, comprising 300+ commits across active GitHub repositories. Seeking a software engineering role to build scalable backend systems and modern web products.

EXPERIENCE

Recruit CRM - Software Engineer Intern Oct 2026 – Present

- Building AI-powered features for Recruit CRM's applicant tracking system (ATS), contributing to production code used in recruiting and hiring workflows
- Integrating LLM-based capabilities into ATS workflows over candidate and job data, applying prompt engineering and structured outputs to keep AI results reliable and usable inside the product
- Working within an established production codebase through code reviews and team-based, iterative delivery

EDUCATION

Noida Institute of Engineering and Technology, Greater Noida 2023–2027
Bachelor of Technology, Computer Science and Engineering | CGPA: 9.12

TECHNICAL SKILLS

- **Languages:** C, C++, Java, Python, TypeScript, JavaScript
- **AI & GenAI:** LangGraph, LangChain, RAG, Graph RAG, Multi-Agent Systems, Knowledge Graphs, Vector Search (pgvector), LLMs, LangSmith, Prompt Engineering
- **Frontend:** React.js, Next.js, Tailwind CSS, Redux, Zustand, shadcn/ui, HTML5/CSS3
- **Backend:** Node.js, Express.js, FastAPI, tRPC, PostgreSQL, MongoDB, Prisma ORM, Convex, Redis, REST APIs
- **DevOps & Cloud:** Docker, AWS, Vercel, Cloudflare Workers, Git, GitHub, Linux, Sentry, Postman
- **Core CS:** Data Structures & Algorithms, Operating Systems, DBMS, OOP, System Design, Microservices Architecture

PROJECTS

Archimedes - Collaborative Multi-Agent AI Platform | Live Demo | GitHub
FastAPI, Next.js, Python, TypeScript, LangGraph, PostgreSQL (pgvector), Upstash Redis, JWT

- Built a local-first multi-agent backend where LangGraph dynamically routes requests through Planner, Research, and Knowledge agents, backed by a Redis job queue for async document ingestion and agent runs
- Implemented Graph RAG using Postgres/pgvector for multi-hop retrieval over user-uploaded documents, with Gemini/Groq as swappable LLM providers behind a provider abstraction layer
- Designed a Fernet-based API-key encryption system supporting zero-downtime key rotation via multi-key decryption fallback and an automated re-encryption script
- Added optional distributed tracing via LangSmith for LLM-call and graph-routing observability; shipped across 100+ commits

Nodebase - Event-Driven Workflow Automation Platform | Live Demo | GitHub
Next.js (App Router, React 19), Prisma ORM, PostgreSQL, tRPC, TanStack Query, Inngest, Sentry, Tailwind CSS/shadcn-ui

- Built a visual, node-based workflow builder supporting manual, Google Forms, and Stripe triggers, with execution nodes for HTTP requests, AI providers, and chat-app integrations (Slack, Discord)
- Engineered reliable async workflow orchestration using Inngest, including a credential vault with encryption-at-rest for user API keys and full execution history with per-run status/error visibility
- Implemented authentication (email/password + GitHub/Google OAuth) and premium billing/gating via Polar; shipped and iterated across 140+ commits

WorkNet - Real-Time Team Communication Platform | Live Demo | GitHub
Next.js, Convex, TypeScript, NextAuth.js, Tailwind CSS, shadcn/ui

- Built a real-time, Slack-style messaging platform with channel-based conversations, threaded replies, emoji reactions, and image sharing on a serverless Convex backend
- Implemented role-based access control (RBAC), code-based workspace invites, and user promotion/permission management
- Deployed on Vercel; open-sourced with community traction (5 stars, 1 fork on GitHub)

ACHIEVEMENTS

- **LeetCode:** 2000+ rating, 1000+ problems solved across platforms (top 5% globally) | **CodeChef:** 3-star rated
- **IICPC CodeFest 2026 Global Prelims:** Rank 2362 among 13,000+ participants (Top ~18%) | **2nd Prize** - NIET WebWeave Hackathon

CERTIFICATIONS

- TechA Certified Java Developer | Java Fundamentals - Oracle Academy | Introduction to Cybersecurity - Cisco
